

GLOBALPAY

Mandatory Architecture & Engineering Deliverables

Section 8 • 17 required diagrams • numbered to match the examination brief

#	Diagram	Presentation coverage
1	Enterprise Financial Technology Architecture	Yes
2	High-Level Solution Architecture	No - here only
3	Detailed System Architecture	No - here only (composite index)
4	Digital Wallet Architecture	Yes (Module 1)
5	Payment Processing Architecture	Yes (Module 2)
6	Open Banking API Architecture	Yes (Module 4)
7	AI Fraud Detection Architecture	Yes (Module 3)
8	CBDC Simulation Architecture	No - here only
9	Enterprise Network Architecture	Yes
10	Network Flow Diagram	Yes (combined in Module 11)
11	Data Flow Diagram (Level 0)	Yes (combined)
12	Data Flow Diagram (Level 1)	Yes (combined)
13	Digital Payment Workflow	Yes (combined in Module 2)
14	Fraud Detection Workflow	Yes (combined in Module 3)
15	Open Banking API Workflow	Yes (combined in Module 4)
16	Database ERD	Yes
17	Sequence Diagram	No - here only

G Enterprise Financial Technology Architecture

1

How the five modules connect

Modules 1-4 write to PostgreSQL; Module 5 reads only; only the named service calls above cross module boundaries

G High-Level Solution Architecture

The 30,000-ft view

2

Security & compliance

ISO 27001 / 27017 / 27018
PCI DSS v4.0*
OWASP Top 10 + API Top 10
ISO 42001 / NIST AI RMF
NIST CSF 2.0 + CIS Controls
COBIT 2019

This is the 30,000-ft view — each module diagram (4-7) zooms into one API layer service

G Detailed System Architecture

3

Composite reference — each module is fully detailed in diagrams 4-8

Module 1

Wallets

React UI -> FastAPI (auth, customers, wallets, merchants) -> PostgreSQL

Module 2

Payments

Validation, transaction engine, double-entry ledger -> ledger tables

Module 3

Fraud AI

Feature engineering -> Logistic Regression -> risk scoring -> human review

Module 4

Open Banking/CBDC

AIS/PIS APIs, CBDC API, activity monitoring -> separate CBDC ledger

Module 5

Executive Dashboard

Read-only aggregator across Modules 1-4 -> executive reports

This slide exists to index the detail, not duplicate it — see diagrams 4-8 for full architecture, framework badges, and data model per module

G Digital Wallet Architecture

Registration, wallet creation, balance operations, merchant accounts

G Payment Processing Architecture

5

Validation, double-entry ledger, transfers, merchant charges

Direct link to Module 3 for fraud scoring — the only true module-to-module call besides Module 4's PIS

G Open Banking API Architecture

Account info & payment initiation APIs, CBDC wallet ops

PIS calls Module 2's transfer logic directly rather than duplicating it — see diagram 8 for CBDC's separate ledger

G AI Fraud Detection Architecture

Feature engineering, classification, mandatory human review

Surfaces to fraud/risk/compliance teams only — never shown to customers

G CBDC Simulation Architecture

Kept separate from the commercial wallet ledger

Enterprise Network Architecture

Laptop deployment: zones, exposed ports, protocols and trust boundaries derived from compose.yaml

Security boundary: only host-mapped ports are externally reachable; PostgreSQL and Redis remain inside the Docker bridge network.

Data Flow Diagram — Level 0

Context view: GlobalPay is one process; only external actors and exchanged information are shown

Boundary rule: databases and internal services do not appear in a Level 0 context diagram.

Data Flow Diagram — Level 1

GlobalPay decomposed into five processes with external actors, named flows and persistent data stores

G Digital Payment Workflow

Validation branch shown explicitly

13

Database Entity Relationship Diagram

Core operational relationships; crow's-foot labels show one-to-one, one-to-many and optional links

AuditLog and ModelRegistry are supporting governance records.

End-to-end lifecycle across all five modules
